

# Special Wellness Alert

## Life and Death Begin in the Colon

### Healthy Colon

### Unhealthy Colon

### Hidden Waste

This might surprise you, but the average person is carrying around 7-25 pounds of dried fecal matter in his or her elimination system. Overweight and allergic people may be harboring a lot more than that! The toxins from this accumulated waste matter are responsible for many body imbalances, and may create weight health problems.

### A Classic Sign

One of the most common complaints that women have about their figures is a potbelly, a classic sign of colon toxicity and very simple to correct with an improved health regimen. A distended abdomen is the sign of a more serious colon problem and is often a fecal ball, gathering more and more coatings the longer it goes undressed.

### Body System Imbalances

Virtually all weight challenges can be traced to imbalances in the colon/digestive tract, as either a primary contributor or a secondary problem. These imbalances which accentuate slowdowns in other critical body systems, like the endocrine (glandular) system and the circulatory system.

## Why are You so Tired?

---

A round robin domino effect is then set into motion. A toxic colon contributes to a toxic circulatory system, and soon the body is simply not able to metabolize food and fat properly and provide energy for vitality in living. Isn't it amazing to realize that colon toxicity from medicines, preservatives, water, and even the air you breathe, residing in mucus derived from undigested and uneliminated food substances lining the walls of your intestine and your colon . . . could be responsible for your fatigue?

## Buildup of a Lifetime

---

A 54-year-old woman in Atlanta, Georgia recently discovered during a colonic (professional colon irrigation) that her body still had a residue of barium which she was only given once when she was 7 years old . . . 47 years earlier. Such coatings can block proper digestion, nutrient absorption, and waste elimination. These coatings provide an excellent breeding ground for germs and parasites. Some symptoms of parasites include restless sleeping, fatigue, poor assimilation and absorption of nutrients, food cravings, especially sugars and breads, as well as an inability to feel satisfied after a large meal.

## What is Normal?

---

"Regularity" in bowel habits means a bowel movement after every meal --- something almost non-existent in our McDonald's™ generation. For those who have frequent diarrhea, diarrhea is just as strong an indicator of colon toxicity as constipation. Don't ignore these warning signs of serious body imbalance. Give yourself a fresh new life of fitness and vitality today.

## Helpful Suggestions

If you have any of the symptoms that are described in this special report, I recommend that you follow a cleansing regimen using a product called *Renew*, (\$31.95) which will remove the accumulated mucous and hardened waste matter and help reverse the toxic cycle.

*Renew*, with its 49 cleansing herbs and fibers, is the most comprehensive, cost-effective, colon intestinal cleanse available in today's market. It's all natural, safe, easy to use and it tastes good!

Another helpful product, *Fit to a Tea*, (\$19.95) is a soothing and non-calorie, herbal tea, which helps cleanse and detoxify the body. *Fit to a Tea* enhances the body's natural processes of detoxification by decreasing the xenobiotic (toxins that come from outside the body) load in the body and by supporting and enhancing the body's detoxification processes.

*Fit to a Tea's* wide range of natural herbal compounds includes flavonoids, alkaloids, essential fatty acids, saponins, nitrates, and amines. The combination of these botanicals enhances their detoxification abilities and multiplies their ability to support the body's own detoxification systems.
